

Systematic Protection

Installation Instructions

- For transport: boards should be piled exactly in-line, carefully according to cut
- Before installation: check floor is clean
- Lay starting to one side
- Boards to install with print above
- Easy to cut: for edges, around pilars, angles ect.
- After installations cover boards with Rele sensitive tape to prevent the underground for staining
- Cleaning: use high-pressure water blaster, hang up for drying

rent or buy on request
2.000.000 sqm protected floors in Europe are grateful to us

Protection systems for Construction

airport, Vienna

Rele Fleece

Messe Wien

underground, Vienna

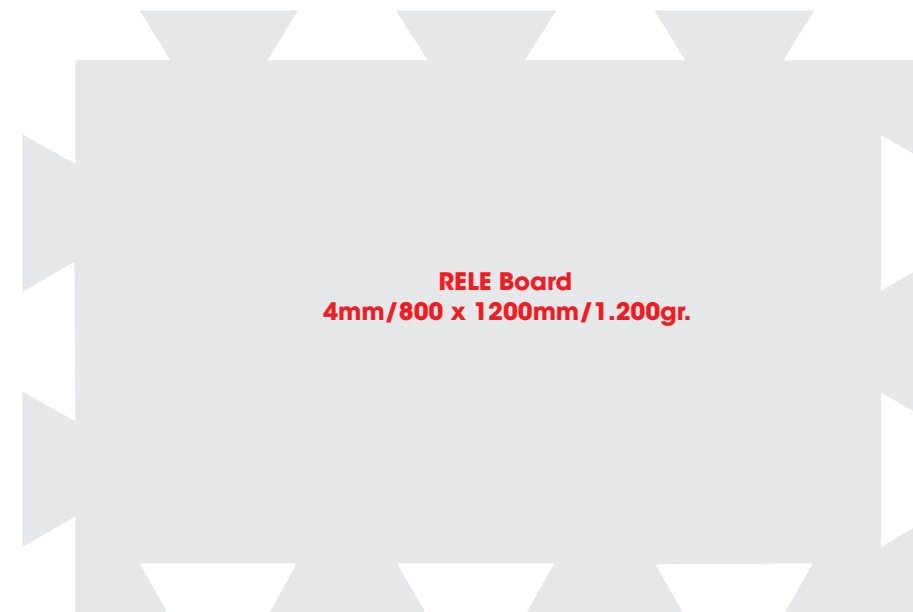

An ideal protection for floors on construction sites. The unique Rele-Clip-System makes the laying of the protection boards very easy.

advantages

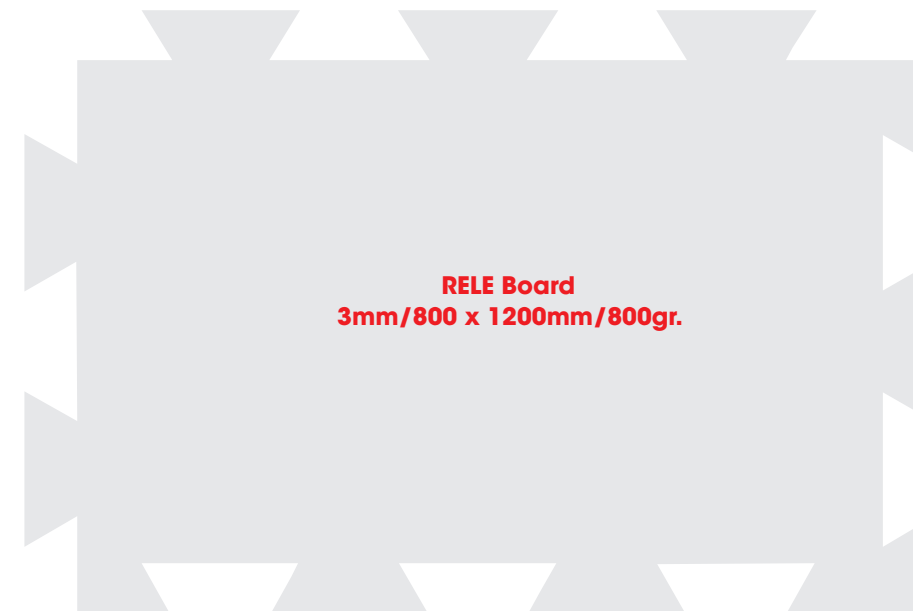

- easy laying through unique Clip System
- systematic protection of all stone and parquet floors as well as hard floor and soft floor coverings
- Low weight compared to other materials (1 sheet = 1 kg = 0,83 m²)
- easy to store and to transport
Euro-pallet size = 1200 x 800 mm and only 4,0 mm thick
- High resistance, even in heavy load on the building site (roll-scaffolding or machines)
- thanks to the transparency of the boards installations below can be easily found
- re-usable in 10 times (on average)
- advertising medium on the object

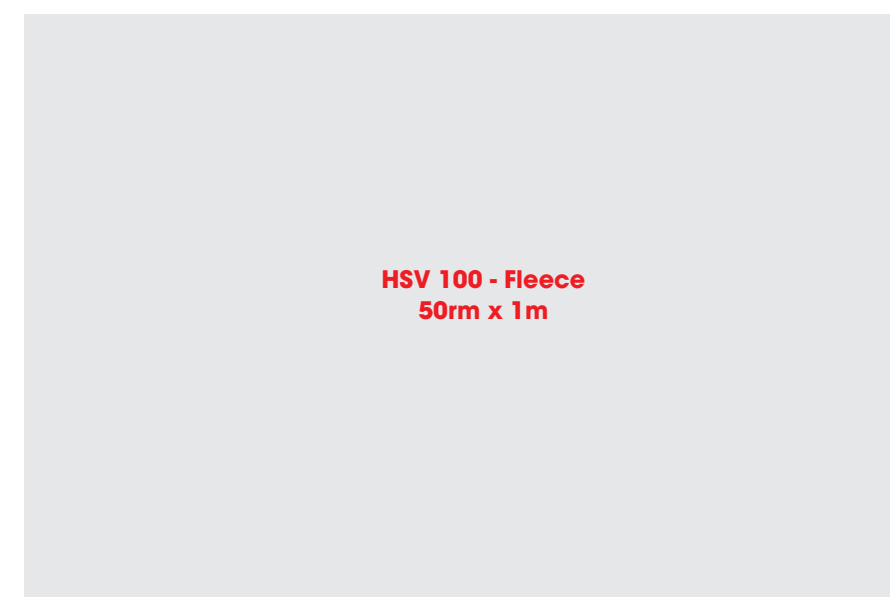

underground, Vienna
